

Title: AgDevCo- Preparation of a Beira Agricultural Growth Corridor (BAGC) investment plan

Date: 2010 - 2011

Client: AgDevCo

Country / Region: Global

CEPA provided support to AgDevco to help them develop an investment plan for increasing the productivity and profitability of smallholder agriculture in Mozambique's Beira Agricultural Growth Corridor (BAGC). The investment plan aimed at developing proposals to help improve the productivity and profitability of smallholder agriculture in the BAGC. The main output of our work was a breadbasket transformation strategy document with an operational plan outlining a technically-, financially-, and socially-feasible approach towards increasing agricultural growth, smallholder incomes and food security in an environmentally sustainable manner. The report included:

- an operational framework of what activity will be done when and by who and against indicative budget;
- proposals on institutional arrangements to operationalise the plan; and
- identification of opportunities for funding the strategy.
