

## **Development of the International Financing Facility for Immunisation (IFFIm)**

**Date:** 2005

**Client:** UK Department for International Development (DFID)

**Country / Region:** Global

The CEPA team provided economic and financial advice to the UK Department for International Development (DFID) on the International Financing Facility for Immunisation (IFFIm). IFFIm is a special purpose vehicle which will raise additional financing in today's markets in order to increase current spending on programs to meet the Millennium Development Goals by immunising children and adults in the world's poorest countries.

CEPA worked with DFID to manage the financial analysis being carried out by Goldman Sachs. This involved reviewing the Goldman Sachs model and writing the Finance Annex for the DFID Project Memorandum.

Following this work, CEPA prepared a generic financial model to be used by DFID and HM Treasury in their consideration of the full International Financing Facility (IFF).
