

Title: Polyclinic Network Modelling Support

Date: 2009

Client: NHS Southwark

Country / Region: United Kingdom

CEPA has been engaged by NHS Southwark to assist in the development of plans for the implementation of a new clinical strategy for out of hospital care in the Borough. CEPA will support the Primary Care Trust by undertaking required modelling work to develop activity, capacity and financial plans for a polyclinic network in Southwark, using a pair of commissioning and financial models developed as part of the Healthcare for London programme.

The modelling work will take account of developing plans for changes to care pathways and the provision of planned and unplanned care in the Borough. The outputs of our work will underpin the Primary Care Trust's strategic planning process for 2009/10.
